

Lurgi Lentjes North America, Inc. to supply Circulating Fluid Bed (CFB) Scrubber and Electrostatic Precipitator

On March 02, 2005, Lurgi Lentjes North America received authorization from a Pulp and Paper company to proceed with an order for the engineering and supply of a Lurgi Lentjes CFB Scrubber with an Electrostatic Precipitator for acid gas and particulate control at a facility in the southeast region of the United States. The system is part of the customer's new circulating fluid bed power boiler project, which will burn petroleum coke to reduce its reliance on natural gas. The value of the contract is approximately US\$8 million. The start-up for the unit is scheduled for Spring 2007.

With this latest order, Lurgi Lentjes North America, Inc. is continuing to build on the synergy between the Circulating Fluid Bed Boiler technology and Circulating Fluid Bed Scrubber, which was first demonstrated in 2002. This coupling of technologies is fast becoming the standard for a cost effective approach to meet the increasing stringent emission requirements being demanded of new solid fuel fired power generation facilities.

Lurgi Lentjes North America, Inc. specializes in providing air quality control technology for the power generation market in North America. With a history going back for more than 90 years, Lurgi Lentjes North America, Inc. is the leading proprietary technology supplier to Utilities, Independent Power Producers, Industrial Power Generators and Merchant Power Generators.
